

# Uniclass for Highways

## Highways Management and Job Costing Software for Local Authorities

Written specifically for the local authority highways market, the software manages all functions ranging from planned and responsive maintenance works through to cyclic inspections, mobile working, asset management, incident management and job costing. The job costing module is available as a solution in its own right and currently interfaces with a number of different third party software solutions.

Intuitive, easy-to-learn Uniclass for highways is the UK's leading software solution for the management of highways repairs, maintenance and job costing. Written with the latest Microsoft technologies, Uniclass for Highways manages the following business processes:

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>◆ Job management—creation, processing and completion</li> <li>◆ Asset management</li> <li>◆ Job costing</li> <li>◆ Stock control</li> <li>◆ Mobile working, surveys and inspections</li> <li>◆ Work tickets</li> </ul> | <ul style="list-style-type: none"> <li>◆ Purchasing</li> <li>◆ Budgeting</li> <li>◆ Timesheets and bonus</li> <li>◆ Schedule of Rates</li> <li>◆ Incidents (RTAs, out of hours, etc)</li> <li>◆ The client-contractor relationship</li> <li>◆ KPI and operational reporting</li> </ul> |
|---|--|

### Job Costing

The job costing module is the most advanced in the market handling progression from initial allocation of funds through to works completion and approval, including automatic handling of retentions. Amendments that result from job confirmation, job variations or extras, can be immediately calculated and reflected in the financial tables. A full audit trail is maintained throughout.

All services and material transactions including bonuses, non-stock items and plant can be calculated and matched to user defined cost and revenue centres. Profitability statements can be created at any time:

- Commitment and revenue modelling for ordered and planned work
- Compares actual with budget and invoice values
- Cost analysis on any type for labour, materials (stock and non-stock), plants, overheads
- Exception reporting with drill down to transaction detail

Automated year-end close down facilities including parallel phase-over of years, budget profiling and monitoring, and expenditure journals, are amongst the standard features. Expenditure code grouping facilities can be used to restrict access to expenditure codes, ensuring appropriate security. The job costing module can interface with numerous third party software such as Symology™, Exor™ and Mayrise™.

Developed in the UK using Microsoft's .NET framework, Uniclass for Highways connects office and mobile workers to share a unified database of streets, locations, assets, contracts, projects and jobs via a web browser.

Deployment of Uniclass for Highways is flexible and scalable. Its technical architecture, and use of standards such as XML, facilitates integration with other software .
